

Keepsake pocket for a 4 x 6 card

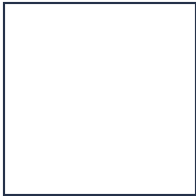

Cut one-piece pocket with 1/2-inch side and bottom tabs.

— Solid = cut - - - Dashed = score and fold toward back

Each lower outer-corner relief spans 1 in from the outside edge and is 1/2 in high. The front starts 1/2 in inside each edge, leaving clearance so the folded side tabs do not overlap the 3.25 in bottom tab. Fold all tabs behind the front.

A 4 x 6 in portrait card is 1/4 in narrower than the 4.25 in front and extends about 1.5 in above the 4.5 in pocket opening.

1 in calibration square

Optional 4 x 6 in fit-check card

Use plain scrap paper to check clearance before cutting finished stock.

4 x 6 in PORTRAIT

Cut on the solid outline; this is a test card, not the pocket.

1 in calibration square

The test card should slide in with roughly 1/8 in clearance per side. Trim only the test copy if needed.
